FITRE: TRADITION AND INNOVATION

Fitre has a long experience in the communications for critical applications and for emergency calls into industrial plants and open air areas. Since over sixty years, **Fitre** provides its solutions to the Italian and the International Market: a story of innovation, quality and customer care.

Fitre products provide reliable and flexible solutions for a wide range of applications; the range spans from systems based on traditional analog and ISDN technologies, up to the most advanced solutions based on IP technology.

Fitre usually cooperates with engineering and installation Companies, supplying standard and custom solutions to meet the requirements of their customers.

ASTRO System Manager

IP technology has imperiously changed the world of telecommunications, including the applications concerning safety,

emergency calls, and industrial communications.

On such a technology, **Fitre** has developed **ASTRO**, a powerful system which, through IP network, allows to connect, in a flexible and configurable way, a wide range of terminals and remote units, keeping them under permanent control of advanced diagnostic functions.

Such remote devices include:

- points of call for emergency communications;
- waterproof and explosionproof telephones, both with handset and handsfree;
- intercom sets, with rugged, waterproof and explosionproof cases;
- horns and loudspeakers, also with built-in amplifier, and with volume automatically regulated by ambient noise;
- cameras and monitors for tele-

surveillance;

- local and/or remote stations, capable to graphically show on the monitor the source and other information related to emergency calls;
- local and/or remote stations, for remote maintenance and remote configuration of the system.

Main applications:

- industrial plants (also for compliance to safety laws);
- tunnels, highways, parkings;
- subways, railways, airports;
- open air areas, parks;
- elevators;
- hospitals and health institutions;
- detention houses, prisons.
